Pseudo-Count Shrinkage (Eqs. 3-4): Numerical Stability at $B = 1$
Evaluated on Real Retinal Fundus (Drishti-GS Test Image drishtiGS_001)

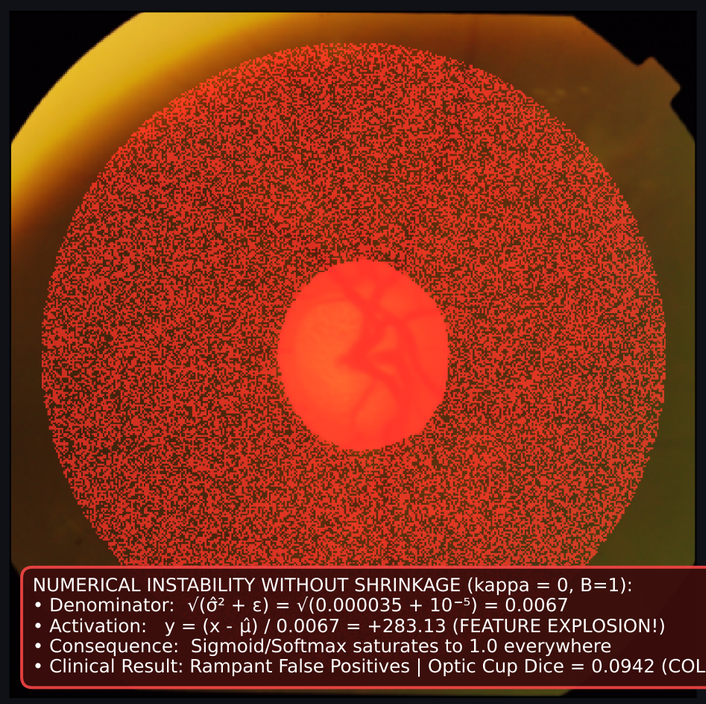

(A) The Spatial Dilemma: High-Res Input vs. Deep Bottleneck

(B) Bayesian Shrinkage Density in Activation Space

(C) Class-conditional adaptation WITHOUT shrinkage ($\kappa = 0$, $B = 1$)

(D) Test-Time Adaptation WITH PMSA-BN Shrinkage ($\kappa_\mu = 8, \kappa_\sigma = 16$)
